

HG-MCCB

Molded Case Circuit Breakers & Earth Leakage Circuit Breakers

Essential for Today, Potential for Tomorrow

Hyundai Electric solely pursues the growth of our customers' business. From power generation to power distribution, we focus on developing and commercializing products and solutions aimed at increasing the efficiency of energy equipment as well as at proactively monitoring and controlling assets in an integrated manner to improve our customers' productivity and management efficiency. We are well aware that our efforts add to the driving force behind our customers' growth and contribute to the creation and maintenance of a more dynamic world. We focus on achieving innovation and strive to evolve continuously to shape a better tomorrow based on today's technological advancement

Solution

Generation

Power Plants

Utility

INTEGRICT

Energy Solution

Energy solution business refers to the business of designing, procuring and establishing a system that enables the efficient use of power energy through integrated management of the production, consumption, sales and operation of energy.

Asset Management Solution

Asset management solution is a business that maximizes the overall business efficiency by systematically managing the performance, risk, maintenance cost and others as well as by providing an asset management solution suitable to the customer's circumstance depending on the product lifecycle (PLC) of various products.

Primary Substation

- Supplied more than 1.2 million MVA in total to 70 countries around the world for the past 40 over years since 1978
- Satisfies the various demands of customers through the acquisition of quality certifications from international accredited institute
- Participates in the world's key technical committee such as CIGRE and others, pioneering the establishment of technology standard related to power network

Power Transformer

· up to 800 kV, 1,500 MVA

Gas Insulated Switchgear

· up to 800 kV

Secondary Substation

- Can be installed in spaces smaller than the open type of substation by using SF6 gas with outstanding insulation and arc extinguishing characteristics
- Secures advanced reliability by producing products that are resistant to external environment and climate effects through the sealing at the charge part
- Extensive project experiences around the world
- Reduces installation period and cost due to simple installation and transportation, convenient maintenance
- Design considering the safety of the workers as priority

Gas Insulated Switchgear

· GIS for 245 ~ 550 kV

Power Transformer

· 800 kV, 1,500 MVA

Gas Insulated Switchgear

· GIS for 170 kV

Generators

Generators

· 2-4 pole

Synchronous Generator

· 100 ~ 50,000 kVA
· 220 ~ 22,000 V, 50/60 Hz
· over 4 pole

Wind Turbine Generator

· up to 5 MW

H+C Series Motor

· 150-1,300 HP
· 2,000 ~ 7,200 V, 50/60 Hz
· 2-8 pole

- Enhanced reliability and secured safety with production of products based on the world's best equipment and stringent quality system
- Realized high efficiency by selecting slot based on FEM
- Realized small and lightweight with optimal design based on FEM analysis method
- Satisfies the quality standards of international accredited institutes (IEC, IEEE, CSA, NEMA, API etc.)

Distribution

Cubicle GIS

· up to 38 kV

- Produces high quality products using angle-less type
- Multi-functional digital protection relay (HiMAP) applied
- High reliability secured, provides various operation information such as protection, measurement and control
- Firm external box, size and compact, making it safe
- Maintains high quality through stringent quality control system and continuous research and development

Cast Resin Transformer

· up to 36 kV, 20 MVA

Marine

Electrical Marine Equipment

- Production of high quality marine devices satisfying the regulations and standards of key marine associations (LRS, ABS, DNV, GL, BV, NK etc.) and world's renowned institutes
- High quality safety secured through the latest equipment and stringent quality control system
- Realization of optimal high efficiency by converging SWGR, Generator, Motor, Telecom, Automation and others

Marine Switchgear

Marine Motor

Metal Clad Switchgear

- up to 38 kV
- IEC, ANSI

Low Voltage Switchgear & Motor Control Center

- H8PU : 660 V, 3,000 A, 80 kA
- H5600 : 660 V, 3,000 A, 100 kA
- HiMCC : 1,000 V, 5,000 A, 100 kA

Vacuum Circuit Breaker

- IEC, ANSI, UL
- up to 36/38 kV, 50 kA, 4,000 A

Air Circuit Breaker

- up to 150 kA, 6,300 A

Molded Case Circuit Breaker

- AC : up to 150 kA, 1,600 A
- DC : up to 100 kA, 800 A

Earth Leakage Circuit Breaker

- up to 85 kA, 800 A, 1,000 mA

Miniature Circuit Breaker

- up to 10 kA, 125 A

Contactor and Overload Relay

- up to 800 A

Vacuum Contactor

- up to 12 kV, 400 A

Surge Protection Device

- up to 200 kA
- AC, DC

Residual Current Circuit Breaker

- MCB : up to 10 kA, 125 A
- RCCB : up to 100 A, 500 mA

Installation Contactor

- up to 63 A

Manual Motor Starter

- up to 100 kA, 80 A

Fuse

- up to 1,250 A

Power System Monitoring and Protection Relay

- HGMAP Type
- HGCAM Type

- Wide range of breaking capacities and frames to meet all customer requirements
- Optimized design providing high performance
- Compact and reliable products type-tested by DEKRA and KERI

High Voltage AC Drive

- 220 ~ 440 V, ~ 132 kW

- Realizes powerful control performance through Sensor-less Vector Control and Auto Tuning
- High speed response due to Digital Signal Processor and High Speed My Com
- Compact design, enabling application in various environments
- Inverter manufactured using accumulated technology and know-how (outstanding technology of developing inverter for high-speed rail)

Digital Motor Protection Relay

- up to 60 A

Medium & High Voltage Induction Motor

- 150-30,000 HP
- 2-30 pole

Inverter Shield Motor

- 1-250 HP
- 2-6 pole

NEMA Premium Efficiency Motor

- 1-500 HP
- 2-6 pole

Explosion-Proof (Class 1 Div.1) Motor

- 1-500 HP
- 2-6 pole
- Hazardous Locations

MCCB

HG Series

Molded Case Circuit Breakers & Earth Leakage Circuit Breakers

Maximized selectivity and safety with wide product range and reinforced breaking performance!

Rated Short-Circuit Current by AF, (Ics = 100 % Icu at 440/460 V)

Wide Product Range

HGM/HGE 32 AF ~ 800 AF

High Breaking Capacity

16 kA ~ 85 kA (at 460 V), Ics = 100 % Icu

Rated Insulation Voltage of 1,000 V

Reinforcement of Protective Coordination

It enables selective breaking.

Adjustable Rated Current (Molded Case Circuit Breaker)

32 ~ 250 AF : 0.8 - 0.9 - 1 Times the Rated Current
400 ~ 800 AF : 0.63 - 0.8 - 1 Times the Rated Current

Adjustable Residual Current (Earth Leakage Circuit Breaker)

100 - 300 - 500 - 1,000 (mA)

Adjustable Residual Current's Non-Operation Hour (Earth Leakage Circuit Breaker)

0 - 200 - 500 - 1,000 (ms)

Molded Case Circuit Breakers

Earth Leakage Circuit Breakers

Characteristics

Enhanced Performance and Various Selectivity

Various Range of Products : 10 Frames, 32 ~ 800 AF

Compatible MCCB, ELCB Dimensions and Common Use of Accessories

Standardization of Product Depth per Frame : 32 ~ 250 AF (68 mm), 400 ~ 800 AF (110 mm)

32, 50, 63, 100 AF

50, 125 AF

160, 250 AF

MCCB

ELCB

400 AF

630, 800 AF

Characteristics

HGM Molded Case Circuit Breaker

Maximized Insulation Performance

The safety of the product has been maximized through enhanced insulation voltage

- Rated Insulation Voltage, U_i : 1,000 V
- Rated Impulse Withstand Voltage, U_{imp} : 8 kV

High Breaking Capacity

Maximum breaking capacity was realized with high breaking capacity in Korea.

- 16 ~ 30 kA at 460 V (32 ~ 100 AF)
- 20 ~ 55 kA at 460 V (125 ~ 250 AF)
- 38 ~ 85 kA at 460 V (400 ~ 800 AF)

Cable Insulation Performance Suitability

In case there is a presence of abnormal condition such as welding of the main contact after tripping of the circuit breaker by realizing the cable insulation performance in accordance with IEC 60947-2, the handle does not move from ON to OFF position. This makes it safe by preventing the operation of circuit breaker caused by the operator's negligence.

Adjustable Rated Current in all Frames

The adjustable rated current of up to 800 AF provides optimal protection for load variations in customer's equipment.

- Long Time (≤ 250 AF) :
3-step adjusting, 80 % - 90 % - 100 % of rated current
- Long Time (400 AF, 800 AF) :
3-step adjusting, 63 % - 80 % - 100 % of rated current

Characteristics Curve (I - t Curve)

Sealing Structure (Option) Applied

Dial sealing structure is applied to prevent arbitrary change of the current set value using a protection cover (Prevent operation of thermal magnetic adjustment knob) (Option).

HYUNDAI

125AF 50/60Hz
 U_i 1000V U_{imp} 8kV

CE Cat. A
IEC 60947-2
PUSH TO TRIP

U_e (V)	I_{cu} (kA)
660 / 690V	~ 8kA
480 / 500V	~ 26kA
440 / 460V	~ 38kA
415V	~ 38kA
380V	~ 42kA
220 / 240V	~ 85kA
250V	≡ 20kA
$I_{cs} = I_{cu} 100\%$	

1.0 ← 0.8
0.9 $I_r(x I_n)$

Service Breaking Capacity ($I_{cs} = 100\% \times I_{cu}$)

100 % service breaking capacity has been realized by significantly improving the breaking capacity by restricting accidental current using an internal current limiting device in case of short-circuit accidents.

- 32 ~ 800 AF
 - 16 ~ 55 kA @ 460 Vac (Below 250 AF)
 - 38 ~ 85 kA @ 460 Vac (400 ~ 800 AF)
- (HGM60, 100 H Type $I_{cs} = 75\% I_{cu}$, HGM60, 100 L Type $I_{cs} = 50\% I_{cu}$)

Various Low Voltage System Protections

HGM Type MCCB realizes current limiting characteristics and outstanding breaking performance and enables various low voltage system protections such as discrimination and cascading.

Discrimination

It is a protection method in which when an accident occurs during load, the downstream circuit breaker that is directly related to the accident circuit operates first so that the other sound branch circuit breaker and the upstream main circuit breaker can feed continuously. It is a low voltage system protection method that can minimize the fault point by selectively preventing faults.

Cascading

In case an accident occurs during load, the upstream main circuit breaker operates earlier than the downstream circuit breaker of the accident circuit for back-up protection. It is an economic protection method. Thus, a circuit breaker with lower breaking capacity than the estimated short-circuit current can be applied.

Characteristics

HGE Earth Leakage Circuit Breaker

Secures Equivalent Breaking Performance with MCCB, Maintains Compatibility with Dimensions and Accessories

- Service Breaking Current, $I_{cs} = 100\% I_{cu}$
- Rated Impulse Withstand Voltage, $U_{imp} : 6\text{ kV}$

Characteristics of Earth Leakage Protection

- Prevention function of damage caused by reverse connection : A circuit capable of preventing damage in PCB and Trip Coil has been applied to prevent damage despite usage during reserve connection caused by the misuse of user.
- The device is safe as it is equipped with a function that prevents unnecessary malfunction of earth leakage circuit breaker caused by temporary drop of voltage and noise signal.
- With the 3-phase power supply method, it safely breaks even during abnormal system voltage caused by open phase.
- By deploying filter circuit in IC, it safely protects the inverter load from grounding.

Adjustable Residual Current / Operating Time

Item	Adjustable Residual Current					Cut-Off Time			
	30 mA	100 mA	300 mA	500 mA	1,000 mA	0 ms	200 ms	500 ms	1,000 ms
Previous (U-ELCB)	Fixed	Adjustable (3 Steps)			-	Fixed	-	-	-
New Product (HG-ELCB)	Fixed	Adjustable (4 Steps)				Adjustable (4 Steps)			

- With adjustable leakage current sensitivity (4 stages), prompt action can be taken without replacing the product depending on the load status.
- Selective protection coordination between upstream circuit breaker and downstream circuit breaker is possible through adjustable residual current and operating time, protecting the circuit safely

Applicable standards and certifications

Applicable Standards

Korean Standards

KS C 8321 Molded Case Circuit Breaker for Industrial Uses

(Molded Case Circuit Breaker for Industrial Uses)

KS C 4613 Circuit Breaker Incorporating Residual Current Protection for Industrial Uses (CBR)

IEC 60947-2

Low Voltage Switchgear and Controlgear, Part 2 (Circuit Breakers)

Approvals and Certifications

HG-Series MCCB has acquired the testing/certification from certified testing institutes registered in STL in accordance with the IEC standard and domestic safety certifications (K 60747-2) and can be installed and applied depending on the usage environment and condition permitted in the standard.

- CB Certification (Certifying Institute, DEKRA)
- Safety Certification
- KS Certification
- Marine Approvals (8 Classifications)

Vibration/Shock-Proof Test Certification Acquired

Our product has qualified the vibration/shock-proof test in accordance with the IEC 60068-2-6 which is a requirement of IACS, an international vessel inspection institute.

- 5 ~ 13.2 Hz : Displacement (1 mm)
- 13.2 ~ 100 Hz : Acceleration (0.7 g)

DEKRA

HGP Type ETU (Electrical Trip Unit)

- Equipped with intelligent electronic function for a new era
- Maximizes a system energy efficiency the function of monitoring commutation and power

It checks current status on the front display and product status on the LED window. (Pre trip alarm)

It monitors the system with a maintenance tool.

It applies a transparent protection cover. (prevent pollution and operation)

Characteristics (HGP)

HGP Molded Case Circuit Breaker

Maximized Insulation Performance

The safety of the product has been maximized through improved insulation voltage

- Rated Insulation Voltage, U_i : 1,000 V
- Rated Impulse Withstand Voltage, U_{imp} : 8 kV

High Breaking Capacity

Maximum breaking capacity was realized with regards to all frames with high breaking capacity in Korea.

- 150 kA at 460 V (Same performance secured in all frames)

Cable Insulation Performance Suitability

In case there is presence of abnormal condition such as welding of the main contact after tripping the circuit breaker by realizing the cable insulation performance in accordance with IEC 60947-2, the handle does not move from ON to OFF position, making it safe by preventing the operation of circuit breaker caused by the operator's negligence.

Adjustable Rated Current in all Frames

The adjustable rated current of up to 800 AF provides optimal protection for load variations in customer's equipment.

- Rated Current
 - Thermal Magnetic Type : 0.8 - 1 times the rated current (3 Step)
 - Electronic Type : 0.4 - 1 times the rated current (9 Step)
- Instantaneous Current
 - Thermal Magnetic Type : 5 - 6 - 7 - 8 - 9 - 10 times the rated current (6 Step)
 - Electronic Type : 1.5 - 10 times the rated current (9 Step, Short Time Adjusting)

Sealing Structure (Option) Applied

Dial sealing structure was applied to prevent arbitrary change of the current set value using a protection cover (Prevent operation of thermal magnetic adjustment knob) (Option).

Model Selection Table

Switch - Disconnecter (HGM NA Type) : 50 ~ 800 AF

Switch - disconnecter is a switch for disconnection without protective function and as the appearance is equivalent to the circuit breaker, all accessories of the circuit breaker can be shared.

Model Selection Table

ZCT Embedded Molded Case Circuit Breaker (HGM Type) : 32 ~ 250 AF

As a model with a built-in ZCT in MCCB, it is a device that detects grounding when connected to an external ELR (Earth Leakage Relay) that can enhance reliability.

※ A battery is consumable. 6 years of use is guaranteed under normal working conditions.
 ※ Even if the battery is discharged, the trip function of the ETU operates.

Model Selection Table

Trip Unit – Basic (N Type)

Protection

Overload : Long Time Protection Fixed Time Delay (Ir)

It protects the system from overload through fixed operation time and adjustable setting range.

Short Circuit : Short time Protection Fixed Time Delay (Isd)

It protects the system from short-circuit accidents through fixed operation time and adjustable setting range.

Short Circuit : Instantaneous Protection (Ii)

It protects the system from short-circuit accidents with a fixed setting range.

Neutral Wire : Neutral Protection (Ii)

- A 3-phase circuit breaker does not protect a neutral wire.
 - In a 4-phase circuit breaker, a setting range is set with a regulating device (dial) to protect the neutral wire.
 - OFF : It does not protect a neutral wire.
 - 0.5 ¹⁾ : It protects a neutral wire at 0.5 Ir (x in).
 - 1 : It protects a neutral wire at 1 Ir (x in).
 - 1.6 : It protects a neutral wire at 1.6 Ir (x in).
- However, when it exceeds 0.63 A (rated current) in the setting range, a neutral wire is protected at 1 Ir (x in).

※ 1) It is set to 16 A or higher.

Display

Status LED

- RUN LED : It informs the operation status of a circuit breaker.
- Trip LED : It turns on when a circuit breaker operates.
- Alarm LED : It turns off at $I > 0.9 \times I_r$ and turns on at $I > 1.1 \times I_r$.
- Battery Check : It checks battery replacement time by pressing the N-Type Battery Check button.
 - Usable : 3 LED lamps turn on.
 - Replacement Time : One Alarm LED turns on.

Protection Setting Range

Trip Unit – D/A/E Type

Protection

Overload : Long time Protection (Ir)

It protects the system from overload through an adjustable setting range and an operational time range.

Short Circuit : Short time Protection (Isd)

It protects the system from short-circuit accidents through an adjustable setting range and an operational time range.

Short Circuit : Instantaneous Protection (Ii)

It protects the system from short-circuit accidents with an adjustable setting range.

Grounding : Ground Fault Protection (I_g)

It protects the system with an adjustable setting range and an operation time range. To find grounding, the residual current is detected in a circuit.

Neutral Wire : Neutral Protection (Ii)

- A 3-phase circuit breaker does not protect a neutral wire.
 - In a 4-phase circuit breaker, a setting range is set with a regulating device (dial) to protect the neutral wire.
 - OFF : It does not protect a neutral wire.
 - 0.5¹⁾ : It protects a neutral wire at 0.5 I_r (x in).
 - 1 : It protects a neutral wire at 1 I_r (x in).
 - 1.6 : It protects a neutral wire at 1.6 I_r (x in).
- However, when it exceeds 0.63 A (rated current) in the setting range, a neutral wire is protected at 1 I_r (x in).

※ 1) It is set to 16 A or higher.

Display

Status LED

- RUN LED : It informs the operation status of a circuit breaker.
- Trip LED : It turns on when a circuit breaker operates.
- Alarm LED : It turns off at I > 0.9 x I_r and turns on at I > 1.1 x I_r.

Button

- It moves around the screens on the display and sets the trip units.
- There are 4 buttons: Up, Down, Menu/Reset, and Enter

- 2) Communication cable spec*
- Min : 0.5mm², Max : 1.5mm²
- Shield twisted pair
*Communication cable is not included.

※ Watch out cable direction(+,-) when customer connect 24V power cable.
- Please refer to [] marked point on left diagram.
- Damage can be occurred in case of reverse or wrong connection.

Internal Options Related to HGP Electronic Type

Type	Image	Features	Type	Image	Features
FAL 250 AF 630 AF 800 AF		Transmits a fault signal of ETU Indicator Fault Alarm LED	DC 24 V Terminal Block		ETU Trip Unit The options for the connection of "A" and "E" type to the external power source Easy to connect a power cable between the products ※ The same purpose as DC 24V power cable
DC 24 V Power Cable		ETU Trip Unit The options for the connection of "A" and "E" type to the external power source (DC 24V) - 1.5 m	DC 3.6 V Battery		A replaceable battery is necessary for the function of saving the ETU time and accidents. - 10 EA vinyl packing

External Options Related to HGP Electronic Type

Type	Image	Features
Test Kit		The external options used to test and set an electronic product.

Trip Unit – D/A/E Type

Display

It displays the setting info. of a trip unit and key measured values on the LCD window.

- D/A Type : Current
- E Type : Current, voltage, and energy

When it is connected with an external power source, it becomes possible to check a trip unit info. and set it even with the MCCB (molded case circuit breaker) open. The following functions activate when it is connected to an external power source.

- Connects with a communication system
- Displays trip info.

Metering

Metering

The trip unit types (D, A, and E) display each phase and current to a neutral wire in RMS. A user can check information in each phase displayed with the Up and Down button.

The A type measures current and the E type provides information of voltage, power, and energy through a display device and communication.

Power Quality

The E type displays total harmonic distortion (THD) of load current and voltage, and 15th order harmonic waves. The relevant information is sent to a PC or a monitor through MODBUS communication.

Test Terminal

For its maintenance, ETU has a test terminal at the front. When the test terminal is connected to the ETU test kit, it is possible to set the ETU and simulate a trip operation.

Test Kit Composition

- A dedicated adapter (AC 100 ~ 220 V 50/60 Hz)
- A dedicated cable to connect the ETU test terminal
- A user manual

Alarm Contact (FAL)

As an additional option, an alarm switch can be constructed only for ETU operations not connected with the MCCB trip alarm switch.

FAL Output Characteristics

Static Outputs : AC 100 ~ 220 V, 64 mA max

FAL Structure and Terminal

FAL Circuit Diagram

※ A lamp is not provided.

Technical Data (ETU)

Operation and Setting – ETU LCD

The ETU LCD provides a user with information of load status and relay settings.

It displays current metering on the default screen.

A user can move to the metering screen to display with the buttons.

In case there is information on phases in the metering screen, it turns sequentially (phase after phase) every 3 seconds.

With the button, a user can move around the screens (Current, Voltage, Power, and Energy).

Model	Mode	Order	Description
D/A/E		12	Thermal ON/OFF ON/OFF Check

Setting Change Screen

To change the ETU settings, keep pressing the two buttons + for more than 3 seconds and the Lock symbol disappears. Then a user can change the settings. When no entry has been made for 10 seconds or the button is pressed, the Lock symbol is displayed automatically. A user moves around the setting screens with the buttons. (Mode :)

1. Relay Setting			
1	Ir Setting Screen 	+ > 3 Seconds Hold The Lock Symbol Disappears.

Setting Change Screen

Basically, the MCCB has thermal characteristics. The thermal functions are aimed to prevent a fire caused by heat and a device from it by simulating the thermal energy of a bus-bar, which runs at a regular phase.

When a user wants to deactivate the functions in a certain situation, he or she can do so by setting on the setting screen as follows.

3. Thermal On/Off (A/E)			
11	Thermal On/Off Screen 	Move Setting Display	
11.1	Thermal On/Off Setting 	Flashing + The State of Changing The Settings Setting Change - ON : Thermal ON - OFF : Thermal OFF I ² t Applying

3	Energy Reset 	Energy Values Reset.	
6	Return to The Energy Metering Screen 		

Model Selection Table

Motor Protection Type of Molded Case Circuit Breaker (HGP Type) : 100 ~ 800 AF

The circuit breaker for motor protection is a circuit breaker for instantaneous trip (magnetic only) equipped with instantaneous and short circuit protection functions only, it is suitable for protecting the motor by assembling it together with the overcurrent relay/ electronic connector.

Model Selection Table

Switch Disconnectors (HGP NA Type) : 50 ~ 800 AF

Switch disconnector is a short circuit switch without protection function and as the appearance is equivalent to the circuit breaker, all accessories can be shared with the circuit breaker.

Technical Data (HGP DC Type)

Installation

Precautions for Use

Please keep in mind the following installation conditions when applying the product to a solar power system. Otherwise, it could lead to damage to the product and the system.

Circuit Diagram

Referring to the contact circuit diagram below, connect the adjacent poles in series.

In the case where a 3P product is used for a 2P product, connect it skipping the phase(s) in the middle.

Connection

In wiring the circuit, a wire must be at least as long as 60 cm.

If it is shorter than that, it can produce excessive heat.

When using the busbar, operate it referring to the Rated Current Derating Table on the right.

When using a self-produced busbar, please keep it to the dimension on page 229 ~ 230. And it is recommended to plate it (busbar) with silver or tin. (A busbar and a heat sink are optional. You need to make an additional order if you want it.)(SBB 25/63/80 GP)

Insulation

Please insert a barrier between the phases after connecting a busbar or a cable if they do not use the same phase.

External Environment

In the case that the internal temperature of the panel is above 40 °C, derate the temperature, referring to the Rated Current Derating Table on the right.

Technical Data

Environmental Operating Conditions

Temperature Derating

The overcurrent characteristic of MCCB has been set to the ambient temperature of 40 °C. If the ambient temperature is less or more than 40 °C, the overcurrent characteristics may differ.

If the Ambient Temperature is less than 40 °C

In order to ensure that the circuit breaker’s overcurrent meet the derating curve at the given ambient temperature, the real current (Ir) has to be adjusted. The temperature correction ratio or each MCCB is shown in the circuit breaker’s characteristics curve.

If the Ambient Temperature is more than 40 °C

As the internal temperature of MCCB is a sum of increased temperature due to current flow and the ambient temperature, if the ambient temperature exceeds 40 °C, thermal damage of internal insulation material of MCCB may occur causing the circuit breaker to trip at an early stage. When applying ambient temperature higher than 40 °C, the rated current must be adjusted as shown in the following rated current correction table.

I_n (Rated Current) :
Circuit breaker’s rating at ambient temperature of 40 °C
 I_r (Real Current) :
Circuit breaker’s rating at the given temperature
 $I_r = \text{Correction Ratio (\%)} \times I_n$

Internal Accessories (HGM)

Auxiliary Switch (AUX) / Trip Alarm Switch (ALT)

It is a contact for indicating the status of the circuit breaker in a remote position.

This contact can be used to realize not only the indication function but also electrical functions such as electrical lock and relay.

Auxiliary Switch (AUX)

- Indicates the ON/OFF status of the circuit breaker contact.
- Status is OFF during TRIP.
- It is comprised of C contact.

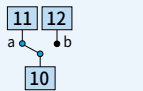

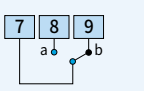

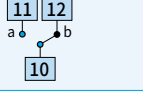

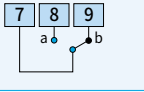

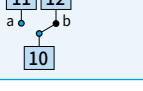

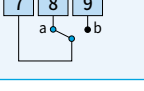

Trip Alarm Switch (ALT)

- It is only activated when the circuit breaker has tripped due to an overload, short circuit or operation of shunt trip switch and does not operate during general ON/OFF.
- Returns to original state when circuit breaker has been reset.
- It is comprised of C contact.

Auxiliary + Trip Alarm Switch (AXT)

- This switch is an integrated combination of auxiliary switch and trip alarm switch.

 ALT : Alarm Switch
 AXT : Auxiliary Alarm Switch (AUX/ALT Integrated Type)

Shunt Trip Device (SHT)

Shunt trip device (SHT) is a device that remotely trips the circuit breaker by applying voltage to both terminals of the coil.

Operating Condition

- $U \geq 0.7 \times U_n$ (More than 70 % of rated voltage applied)
- As for impulse type voltage, more than 20 ms applied

Rated Voltage and Characteristics (100 ~ 250 AF)

Rated voltage (Un)	Power Consumption	
	VA (W)	A (A)
DC	24 V	50.2
	48 V	94.6
	60 V	91.2
	100 ~ 120 V	11.8
	125 V	58.1
AC (50/60 Hz)	100 ~ 120 V	75.2
	200 ~ 250 V	64.8
	380 ~ 480 V	131
Rated Operational Voltage	0.7 ~ 1.1 × Un	
Operating Time	50 ms	

※ Controller output voltage : DC 45 V

SHT Wiring

1. SHT Only

※ Not applicable to
HGM400, 630, 800 AF DC 24 V

2. HGM400, 630, 800 AF DC 24 V (SHT + Controller)

Possible Location for Installation

※ SHT : Shunt Trip
UVT : Under-Voltage Trip

SHT

Internal Accessories (HGM)

Under-Voltage Trip Device (UVT)

In case the circuit voltage drops to less than 35 % of the rated voltage (U_n), UVT automatically initiates a trip in the circuit breaker to prevent damage to the load.

Opening Conditions

- Operating characteristics are guaranteed to conform to the IEC 60947-2 standard criteria.
- Trip Condition of Circuit Breaker : $U \leq 0.35 \times U_n$
- Fixed Type : 50 ms (400 ~ 800 AF)
- Time Delay Type : 500 ~ 1,000 ms (Below 250 AF)
- No Trip Condition of Circuit Breaker : $U \geq 0.7 \times U_n$
- In the $U = 0.35 \sim 0.7 \times U_n$ interval, the circuit breaker can be tripped but the operation is not guaranteed.

Time Delay Function

Malfunction is prevented during a short momentary voltage drop of below 500 ms. (Below 250 AF)

UVT Wiring

1. HGM30 ~ 250 AF (UVT + Controller)

※ DC 24 V among HGM400 and above products require a controller.

2. HGM400, 630, 800 AF (UVT Only)

Closing Conditions

- In case of circuit breakers assembled with UVT, the circuit breaker cannot be ON (Closing) when voltage is not applied to the UVT.
- The reset operation after the circuit breaker's trip caused by UVT operation may differ depending on the circuit breaker's type and UVT structure.
- In order to close the circuit breaker, Voltage must be applied to UVT.
- Closing Condition : $U \geq 0.85 \times U_n$

Rated Voltage and Characteristics (Below 250 AF)

Rated Voltage (U_n)	Power Consumption		
	VA (W)	A (mA)	
DC	24 V	0.96	40
	48 V	1.1	22.7
	100 ~ 110 V	2.2	20
AC (50/60 Hz)	100 ~ 120 V	5.1	42
	200 ~ 230 V	6	26
	380 ~ 415 V	9.6	23
	440 ~ 480 V	12.5	26
Starting Voltage	Opening	0.35 ~ 0.7 \times U_n	
	Closing	0.85 \times U_n	
Rated Operational Voltage	0.85 ~ 1.1 \times U_n		
Operating Time	500 ~ 1,000 ms		

※ Do not use UVT for electrical interlocking system.

※ Controller output voltage : DC 45 V

UVT Wiring

Under-Voltage Device (UVT)

If the under-voltage trip device is installed in the circuit breaker, the circuit breaker is tripped or is not closed in case the circuit voltage is below the reference value.

In case the circuit voltage drops to less than 35 % of the rated voltage (Un), UVT automatically initiates a trip in the circuit breaker to prevent damage to the load.

Opening Conditions

- Operating characteristics are guaranteed to conform to the IEC 60947-2 standard criteria.
- Trip Condition of Circuit Breaker : $U \leq 0.35 \times U_n$
- No Trip Condition of Circuit Breaker : $U \geq 0.7 \times U_n$
- In the $U = 0.35 \sim 0.7 \times U_n$ interval, the circuit breaker can be tripped but the operation is not guaranteed.

Closing Conditions

- In case of circuit breakers assembled with UVT, the circuit breaker can be OFF/RESET when voltage is not applied but the circuit breaker cannot be ON (Closing).
- In order to close the circuit breaker, Voltage must be applied to UVT.
- Closing Condition : $U \geq 0.85 \times U_n$

External Accessories (HGM)

Locking Device

Handle Locking Device Using Padlock (PLD)

This device is used for locking the handle of circuit breaker to the OFF position by using a padlock. Padlock is not provided separately and up to 3 can be used. The applicable specifications of padlocks are as below.

Type	Application	Padlock Diameter ¹⁾
PLD 10GM	HGM30 ~ HGM250	5 mm
	HGE30 ~ HGE250	
PLD 40GM	HGM400 ~ HGM800	6 mm
	HGE400 ~ HGE800	

Mechanical Interlock

This device interlocks two circuit breakers by using a mechanical interlock.

Key Features

- It prevents two breakers from closing at the same time.
- All circuit breakers are turned OFF. The applicable specifications of padlocks are as below.

Type				Application	Padlock Diameter ¹⁾

Terminal Cover

As a part that insulates the circuit breaker's live and load side of terminal area from the outside, it prevents electric shock and short-circuit accidents that may occur due to direct contact of people's hand or tools such as drivers with the live current part. When the terminal cover is used, the protection grade of IP40 is applied to the power part. Based on the connection method of the circuit breaker, it can be classified into long or short type for use and various handles and interlock devices can be combined for use.

Short Type

It is suitable for plug-in or rear connection.

Long Type

It is suitable for front connection by using wires, bus bar or lug terminals.

External Accessories (HGM)

Insulation Barrier

As a part used to prevent accidents with regards to insulation and conductive foreign substance between the circuit breaker terminals, it improves the performance of phase-to-phase insulation by installing it in the groove between the circuit breaker's terminals. It can easily be assembled even if the circuit breaker has already been installed and in case the two circuit breakers have been installed side by side, it can also be assembled in the gap between the two circuit breakers. In addition, it is used in the terminal cover and plug-in base.

※ In case insulation barrier is not mounted between the circuit breaker's terminal, it may cause secondary short-circuit accidents so it must be used.
Insulation barrier must be installed towards the direction of the circuit breaker's line indication part.

Rotary Handle

Rotary handle is a product that can check and operate MCCB's ON/OFF/TRIP even when the panel door is closed by installing the circuit breaker in enclosed switchgear or on MCCB panel and others. There are two types of rotary handle, front contact type and extension type and all the rotary handles offer panel door locking function and handle locking function. The rotary handle can be rotated clockwise to turn the circuit breaker "ON" and according to the mounting direction of MCCB, it is categorized into the upper line, the right line and the left line. The IP rating of the handle is IP40/IP54.

Front Contact Rotary Handle

- 32 ~ 250 AF : The handle is attached directly to the circuit breaker.
- 400 ~ 800 AF : The handle attached to the door of the panel.

Extension Rotary Handle

It is suitable in case the distance between the circuit breaker and the panel door is long. The handle is attached to the door of the panel and there is no trip-button function.

Type			Application

※ When installing an extension rotary handle, the eccentric tolerance of the handle drive shaft is 1.5 degrees.

External Accessories (HGM)

Rotary Handle

Types of Handle Depending on the Circuit Breaker's Installation Type

Rotary handle is divided into the following three types depending on the circuit breaker's direction of power supply.

How to Operate the Handle

Operating Direction : Turn the handle clockwise to turn the breaker ON.

- Circuit Breaker ON : Rotate the handle to ON position. (Figure 1)
- Circuit Breaker OFF : Rotate the handle to OFF position. (Figure 2)
- Circuit Breaker TRIP : If the circuit breaker is tripped, the handle will automatically return to TRIP position. (Figure 3)
- After the circuit breaker is tripped, rotate the handle to the RESET position first (Figure 4) then rotate to the ON position and the circuit breaker will turn ON (Figure 1).
- If you need to open the door when the handle is in the ON state, rotate the RELEASE screw to the direction of the arrow then open the door (Figure 5).

Handle Locking Device

Lock Function	OFF State Door Lock	ON State Door Lock	Reverse Interlock	Handle Padlock
Details	<ul style="list-style-type: none"> • Impossible to open the panel door when the circuit breaker is in the OFF state. • Possible at RESET position • Possible to open the panel door after rotating the handle to RESET 	<ul style="list-style-type: none"> • Impossible to open the panel door when the circuit breaker is in the ON state • Possible to open the panel door after rotating the RELEASE screw 	<ul style="list-style-type: none"> • Impossible to close the circuit breaker (ON) in case the panel door is open 	<ul style="list-style-type: none"> • Padlocking function which locks using a padlock to prevent handle operation. • Padlock is not provided separately and the number of padlocks depends on the padlock diameter. (Refer to the table below) • As for the specifications of the applicable padlocks, refer to the table below.

Application	Padlock Diameter ¹⁾	No. of Padlocks that can be Used
HGM/HGE30 ~ 250	6 ~ 8 mm	Ø6,Ø7 : 2 EA Ø8 : 1 EA
HGM/HGE400 ~ 800	5 ~ 7 mm	3 EA

※ 1) Padlock not included

Front Connection of Fixed Devices

Straight/spreader bus bar or lug terminal can be selected for use depending on the size specification of the cable or bus bar to be connected to the circuit breaker.

Insulated Bar Connection

In case the bus bar pitch of the switchgear is equal to the circuit breaker, it can be connected directly to the circuit breaker by using an insulation tube. Refer to the following connection bus bar specification for connection. Interphase barrier and terminal cover must be used.

Application	Connection Bus Bar Dimensions (mm)				Applicable Bolt and Tightening Torque	
	A	B	C	D	Bolt Spec.	Max. Tightening Torque (kgf×cm)
HGM/HGE 30, 50E/S, 60, 100	< 7.5	< 17	$\varnothing \geq 5.5$ (≤ 50 A)	A + 7.5	M5 Screw (≤ 50 A)	28.5
	< 7.5	< 17	$\varnothing \geq 9$ (> 50 A)	A + 7.5	M8 Screw (> 50 A)	110
HGM/HGE50H/L, 125	< 7.5	< 20	$\varnothing \geq 9$	A + 7.5	M8 Screw	110
HGM/HGE160, 250	< 10	< 27	$\varnothing \geq 9$	A + 10	M8 Hex Socket	110
HGM/HGE400	< 12.5	< 30	$\varnothing \geq 11$	A + 12.5	M10 Hex Socket	270
HGM/HGE630, 800	< 12.5	< 45	$\varnothing \geq 13$	A + 12.5	M12 Hex Socket	470

Crimp Terminal

The terminal that conforms to the specification (crimped/copper tubing terminal) must be used and the interphase barrier and the terminal cover must be used. Select the terminal that meets the material and specification of the cable according to the circuit breaker's rating. The terminal is not provided separately. Refer to the table below for the wire specifications for the main ratings.

Application Type	Rated Current	Cu Cable Size (mm ²)	Applicable Terminal Dimensions (mm)	
			A	B
HGM/HGE 30, 50E/S, 60, 100	32	6	$\varnothing \geq 5.5$	< 18
	50	10	$\varnothing \geq 5.5$	
	63	16	$\varnothing \geq 9$	
	100	35	$\varnothing \geq 9$	
HGM/HGE50H/L, 125	50	10	$\varnothing \geq 9$	< 21
	125	50	$\varnothing \geq 9$	
HGM/HGE160, 250	160	70	$\varnothing \geq 9$	< 28
	250	120	$\varnothing \geq 9$	
HGM/HGE400	400	240	$\varnothing \geq 11$	< 30
HGM/HGE630, 800	800	240×2	$\varnothing \geq 13$	< 45

Connection Bus Bar

Crimped Terminal

External Accessories (HGM)

Plug-in Connection Devices

If the plug-in connection method is used, the circuit breaker can be replaced quickly and accurately without separating the power cable during a malfunction of a circuit breaker. Therefore, if plug-in type circuit breaker is installed in important electrical facilities such as shipping, broadcast station and others, the circuit breaker can be replaced and maintained quickly and conveniently without disconnecting the bus bar.

- Applicable to 32 ~ 800 AF.
- Offers convenient maintenance of switchgear.
- Convenient and relaxed installation after manufacture of the switchgear.
- Circuit breaker can be removed or replaced quickly without touching the terminal connection area.
- Connection block can be made by connecting the internal accessory to the circuit breaker.
- Type : For switchgear (TDM/TDF), for distribution board (TDA)
- Composition : Plug-in devices, plug-in MCCB, terminal cover or insulation barrier (Option).

※ 1) Plug-in MCCB must be used to apply plug-in connection method.

2) In case of not using the terminal cover, be sure to install an interphase barrier.

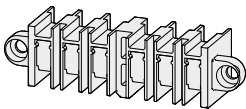

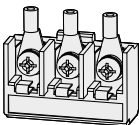

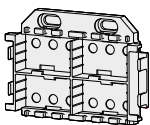

External Accessories (HGM)

Plug-in Devices

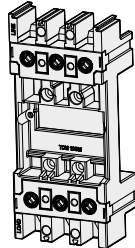

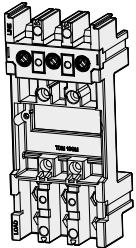

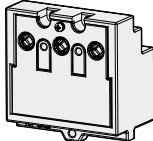

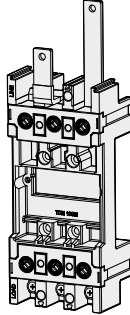

It is a connection block for plug-in MCCB installation and it is available according to the applicable panel and usage.

TDM Type

- TDM-P : It is comprised of plug-in terminal for both line/load for convenient use of connection block depending on the structure of the switchgear.
- TDM-F : Only plug-in parts of the line terminal are provided in TDM-P products.

TDF Type

- Only the line terminal is comprised of plug-in terminal but the plug-in device can be fixed to the switchgear using the same method as TDM-P.

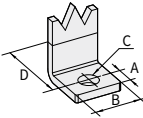

Applied Panel	Switchgear			Distribution Board	
Type	TDM-P	TDM-F	TDF	TDA (2 row)	TDA (1 row)

※ Operating Voltage Range : 85 ~ 110 % (DC 24 V : 95 ~ 110 %)

Circuit and Wiring Drawing

- : Motor
- : ON Relay
- : OFF Relay
- : Relay for Motor
- : ON Limit Switch
- : OFF Limit Switch
- : Auto/Manual Limit Switch

※ Precaution for mounting

When mounting the motor operator on MCCB, it must be mounted when the MCCB's handle position is in OFF position. Mounting the motor operator in other positions (ON, TRIP) may cause damage to the motor.

External Accessories (HGP)

Locking Device

Padlock Device (PLD)

This device is used for locking the handle of circuit breaker to the OFF position by using a padlock. Padlock is not provided separately and up to 3 can be used. The applicable specifications of padlocks are as below.

Mechanical Interlock

This device interlocks two circuit breakers by using a mechanical interlock.

Key Features

- It prevents two breakers from closing at the same time.
- All circuit breakers are open. The applicable specifications of padlocks are as below.

Type	Application	Padlock Diameter ¹⁾
PLD 16GP	HGP50D, HGP125D, HGP160D	5 ~ 6 mm
PLD 25GP	HGP250 (HGP100/MCP)	
PLD 63GP	HGP400, HGP630	
PLD 80GP	HGP800	

Type	Application	Padlock Diameter ¹⁾

MIF 80GP 3	MIF 80GP R4	HGP800

※ 1) Padlock not included

External Accessories (HGP)

Terminal Cover / Insulation Barrier

Terminal Cover

It is our insulation part of circuit breaker for live and load side of terminal area from the outside and it prevents electric shock and short-circuit accidents that may occur due to direct contact of people's hand or tools with the live current part. When the terminal cover is used, the protection degree of IP40 is applied to the conductor part. Based on the connection method of the circuit breaker, it can be classified into long or short type for use and various handles and interlock devices can be combined for use.

Short Type

It is suitable for plug-in or rear connection.

Long Type

It is suitable for front connection using wires, bus bar or lug terminals.

Insulation Barrier

As a part used to prevent accidents with regards to insulation and conductive foreign substance between the circuit breaker terminals, it improves the performance of phase-to-phase insulation by installing it in the groove between the circuit breaker's terminals. It can easily be assembled even if the circuit breaker has already been installed and in case the two circuit breakers have been installed side by side, it can also be assembled in the gap between the two circuit breakers. In addition, it is used in the terminal cover and plug-in base. In case insulation barrier is not mounted between the circuit breaker's terminal, it may cause secondary short-circuit accidents so it must be used.

Type			Application	Pitch (mm)	No. of Parts (EA/Set)

Terminal Cover Short Type

Terminal Cover Long Type

Insulation Barrier

※ In case of using as front connection, please use it after removing the indicated part.

※ Additional barrier required for close mounting is provided as additional options. (It may cause secondary accidents, so it must be installed.)

Rotary Handle

Rotary handle is a product that can check and operate MCCB's ON/OFF/TRIP even when the panel door is closed by installing the circuit breaker in enclosed switchgear or on MCCB panel and others. There are two types of rotary handle, front contact type and extension type and all the rotary handles offer panel door locking function and handle locking function. The rotary handle can be rotated clockwise to turn the circuit breaker "ON" and according to the mounting direction of MCCB, it is categorized into the upper line, the right line and the left line. The IP grade of the handle is IP40/IP54.

Front Contact Rotary Handle

- 160 ~ 250 AF : The handle is installed directly to the circuit breaker.
- 630 ~ 800 AF : The handle is installed to the door of the panel.

Type			Application
Upper Line	Right Line	Left Line	
TFG 16GP U	TFG 16GP R	TFG 16GP L	HGP50D, HGP125D, HGP160D
TFG 25GP U	TFG 25GP R	TFG 25GP L	HGP250 (HGP100/MCP)
TFG 63GP U	TFG 63GP R	TFG 63GP L	HGP400, HGP630
TFG 80GP U	TFG 80GP R	TFG 80GP L	HGP800

Extension Rotary Handle

It is suitable if the distance between the circuit breaker and the panel door is long. The handle is installed to the door of the panel and there is no trip-button function.

Type	Application
TFH 16GP	HGP50D, HGP125D, HGP160D
TFH 25GP	HGP250 (HGP100/MCP)
TFH 63GP	HGP400, HGP630
TFH 80GP	HGP800

※ When installing an extension rotary handle, the eccentric tolerance of the handle drive shaft is 1.5 degrees.

External Accessories (HGP)

Rotary Handle

Types of Handle by the Circuit Breaker's Installation Type

Rotary handle is divided into the following three types by the circuit breaker's direction of power supply.

How to Operate the Handle

Operating Direction : Turn the handle clockwise to turn the breaker ON.

- Circuit Breaker ON : Rotate the handle to ON position. (Figure 1)
- Circuit Breaker OFF : Rotate the handle to OFF position. (Figure 2)
- Circuit Breaker TRIP : If the circuit breaker is tripped, the handle will automatically return to TRIP position. (Figure 3)
- After the circuit breaker is tripped, rotate the handle to the RESET position first (Figure 4) then rotate to the ON position and the circuit breaker will turn ON (Figure 1).
- If you need to open the door when the handle is in the ON state, rotate the RELEASE screw to the direction of the arrow then open the door (Figure 5).

Handle Locking Device

Lock Function	OFF State Door Lock	ON State Door Lock	Reverse Interlock	Handle Padlock ¹⁾
Details	<ul style="list-style-type: none"> • Impossible to open the panel door when the circuit breaker is in the OFF state. • Possible at RESET position • Possible to open the panel door after rotating the handle to RESET 	<ul style="list-style-type: none"> • Impossible to open the panel door when the circuit breaker is in the ON state • Possible to open the panel door after rotating the RELEASE screw 	<ul style="list-style-type: none"> • Impossible to close the circuit breaker (ON) in case the panel door is open 	<ul style="list-style-type: none"> • Padlocking function which locks using a padlock to prevent handle operation. • Padlock is not provided separately and the number of padlocks depends on the padlock diameter. (Refer to the table below) • As for the specifications of the applicable padlocks, refer to the table below.
Front Contact Type (TFG)	●	●	● (160/250 AF Only)	●
Extension Type (TFH)	●	●	-	●

※ 1) For TFG 250 AF or less, The handle remains ON when the circuit breaker is tripped after padlocking in ON position.

Application	Padlock Diameter ¹⁾
HGP50D, HGP125D, HGP160D, HGP250	6 ~ 8 mm
HGP400, HGP630, HGP800	5 ~ 7 mm

※ 1) Padlock not included

Front Connection of Fixed Devices

Straight/spreader bus bar or lug terminal can be selected according to the size and specification of the cable or bus bar to be connected to the circuit breaker.

Insulated Bar Connection

In case the bus bar pitch of the switchgear is equal to the circuit breaker, it can be connected directly to the circuit breaker by using an insulation tube. Refer to the following connection bus bar specification for connection and the insulation barrier between phases and terminal cover must be used.

Application	Connection Bus Bar Dimensions (mm)				Applicable Bolt and Tightening Torque	
	A	B	C	D	Bolt Spec.	Max. Tightening Torque (kgf×cm)
50 ~ 160 AF	< 9	< 22	Ø9	A+9	M8 Screw	136
250 AF	< 9	< 25	Ø9	A+10	M8 Hex Socket	136
400 ~ 630 AF	< 15	< 32	Ø10.5	A+15	M10 Hex Socket	270
800 AF	< 15.5	< 50	Ø13	A+16.5	M12 Hex Socket	470

Crimped Terminal

Standard terminals (crimped/copper tubing terminal) must be used and the insulation barrier between phases and the terminal cover must be used. Standard terminals must be selected for use according to the rating of the circuit breaker and the terminal is not provided separately. As for the cable specifications with regards to important ratings, refer to the table below.

Application	Rated Current	Cu Cable Size (mm ²)	Applicable Terminal Dimensions (mm)		
			A	B	C
50 ~ 160 AF	100 A 160 A	35 70	Ø9	< 22	< 9
250 AF	160 A 250 A	70 120	Ø9	< 25	< 9
400 ~ 630 AF	400 A 630 A	240 185×2	Ø10.5	< 32	< 15
800 AF	800 A	240×2	Ø13	< 50	< 15.5

Busbar

Straight Busbar

It is used to meet the cable and standards of the switchgear.
(Pitch between the poles maintained)

Spreader Busbar

It is used to extend the internal insulation distance of the switchgear.
(Pitch between the poles extended)

Series Busbar

Used for serial connection of adjacent phases. (DC only)

Straight Busbar

Spreader Busbar

Series Busbar

Application	Pole	Straight		Spreader		Series

Plug-in Connection Devices

When the plug-in connection method is used, the circuit breaker can be replaced quickly and accurately without power off during a malfunction of a circuit breaker. Therefore, in case the plug-in method of circuit breaker is installed in important electrical facilities such as shipping, broadcast station and others, the circuit breaker can be removed and maintained quickly and conveniently without disconnecting the bus bar.

- Applicable to 50 ~ 800 AF, up to 3P.
- Offers convenient maintenance of switchgear.
- Convenient and relaxed installation after manufacture of the switchgear.
- Circuit breaker can be removed or replaced quickly without touching the terminal connection area.
- Type : For switchboard (TDM/TDF)
- Composition : Plug-in devices, plug-in MCCB, terminal cover or insulation barrier (Option)

Plug-in MCCB (For HGP)

In order to apply the plug-in connection method, the plug-in MCCB must be used instead of the general type, even for the MCCB. The product covers various breaking capacity up to the rated current of 800 A so this product conforms to the switchgear standard. Connection board (Connector) can be added to connect internal accessories to the circuit breaker.

External Accessories (HGP)

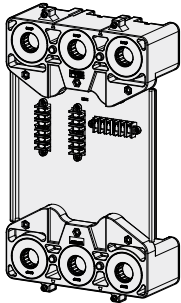

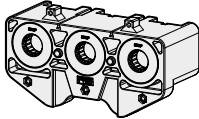

Plug-in Connection Devices

Plug-in Devices

As a connection block in which plug-in MCCB can be installed, it is available according to the applied panel and the purpose.

TDM Type

- TDM-P : It is comprised of plug-in terminal for both line/load for convenient use of connection block depending on the structure of the switchgear.
- TDM-F : Only plug-in parts of the line terminal are provided in TDM-P products.

Applied Panel	For Switchgear	
Type	TDM-P	TDM-F
Composition		
Purpose	Line/Load Side	Line Side
Applicable MCCB	HGP50 ~ 800 AF 3P	

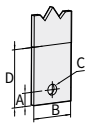

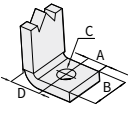

Specification of Connection Busbar

The bus bar of the switchgear can directly be connected to the plug-in device.

The specifications of the applicable bus bar are as below and the insulation barrier or terminal cover must be used.

There is no separate bus bar for connection.

Unit : mm

Product	A	B	C	D	Remark	Product	A	B	C	D	Remark
50 ~ 160 AF	< 12	< 21	$\varnothing \geq 8.5$	A + 18		50 ~ 160 AF	< 12	< 21	$\varnothing \geq 8.5$	< 12

Auxiliary Handle (THA)

As an auxiliary handle used to reduce the operating force of ON, OFF, RESET in large capacity circuit breaker (400 ~ 800 AF), it is a standard product provided. It comes together with a holder for storing auxiliary handle that can be fixed to the switchboard panel.

External Accessories (HGP)

Motor Operator

This device is used for turning the circuit breaker ON/OFF from remote position. It is convenient for establishing automation system for low-voltage load system and for selecting load when operating under emergency power.

※ Precaution for mounting

When mounting the motor operator on MCCB, it must be mounted when the MCCB's handle position is at in position. Mounting the motor operator in other positions (ON, TRIP) may cause damage to the motor.

Technical Data (HGM/HGE)

Environmental Operating Conditions

Temperature Derating

The overcurrent characteristic of MCCB has been set to the ambient temperature of 40 °C. If the ambient temperature is less or more than 40 °C, the overcurrent characteristics may differ.

If the Ambient Temperature is lower than 40 °C

In order to ensure that the circuit breaker’s overcurrent meet the derating curve at the given ambient temperature, the real current (Ir) has to be adjusted. The temperature correction ratio or each MCCB is shown in the circuit breaker’s characteristics curve.

If the Ambient Temperature is higher than 40 °C

As the internal temperature of MCCB is a sum of increased temperature due to current flow and the ambient temperature, if the ambient temperature exceeds 40 °C, thermal damage of internal insulation material of MCCB may occur causing the circuit breaker to trip at an early stage. When applying ambient temperature higher than 40 °C, the rated current must be adjusted as shown in the following rated current derating table.

In (Rated Current) :
Circuit breaker’s rating at ambient temperature of 40 °C
Ir (Real Current) :
Circuit breaker’s rating at the given temperature
 $I_r = \text{Correction Ratio (\%)} \times I_n$

Technical Data (HGM/HGE)

Environmental Operating Conditions

Altitude Derating

The characteristics of the circuit breaker is not affected at an altitude of less than 2,000 m Characteristics of insulation and air cooling of the circuit breaker are reduced at an altitude of more than 2,000 m and the rated current and rated voltage must be adjusted as shown in the table below. However, there is no change in the characteristics of breaking capacity.

Circuit Breaker	Altitude	2,000 m	3,000 m	4,000 m	5,000 m
HGM Type MCCB 32 ~ 800 AF	Withstand Voltage (V)	3,000	2,500	2,100	1,800
	Insulation Voltage (V) U_i	1,000	850	750	600
	Maximum Operational Voltage (V) U_e	690	590	520	460
	Average Through-Current (A), at 40 °C $I_n x$	1	0.96	0.93	0.9
HGE Type ELCB 32 ~ 800 AF	Withstand Voltage (V)	3,000	2,500	2,100	1,800
	Maximum Operational Voltage (V) U_e	460	390	345	275
	Average Through-Current (A), at 40 °C $I_n x$	1	0.96	0.93	0.9

Vibrations

The excessive vibration may cause problems such as decrease of breaking capacity, lower dynamic strength, reduction of electric current conductivity or compromising safety of operating characteristics. Therefore, proper consideration is required with regards to these environmental stresses when it comes to designating the circuit breakers. These stresses are generated by the vibration during transportation, magnetic impact during opening and closing operation and influence of adjacent devices. Our circuit breaker has been verified in accordance with the standards with regards to vibration resistance.

Vibration test

Vibration test is verified with the standard requested by the shipping certification institute in compliance with IEC 60068-2-6. Out of the vibration test items, resonance test and vibration Endurance test were verified based on the following standard.

Vibration Endurance test

A sinusoidal wave with frequency of 30 Hz is applied for 90 minutes to check for abnormalities.

- 30 Hz : 0.7 g Acceleration

Resonance test

It confirms whether vibration is generated in the characteristics part of MCCB by slowly changing the frequency in the frequency sector of the following sinusoidal wave.

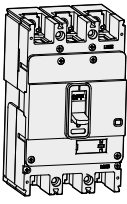

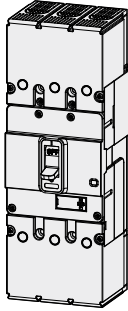

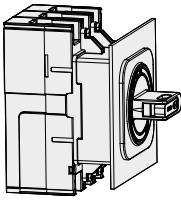

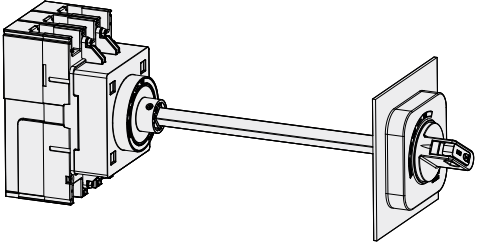

- 5 ~ 13.2 Hz : 1 mm Displacement
- 13.2 ~ 100 Hz : 0.7 g Acceleration

Seismic Performance and Shock Tolerance Table

Item	Seismic
Test Condition Mounting Posture Direction of Vibration, Shock	<ul style="list-style-type: none"> • Vertical mounting • Up-down, left-right, front-back
Test Result	<ul style="list-style-type: none"> • Non-conduction (ON or OFF status) • Status where rated current has been conducted on until the temperature of MCCB becomes constant and continuous • If it is ON, it should not turn OFF • If it is OFF, it should not turn ON • No abnormal status such as damage, deformation or loosened screw part • The characteristics of switch and trip after the test must be normal

Degree of Protection

The MCCB's IP rating is defined based on IEC 60529. The IP rating also depends on product conditions.

Condition	Circuit Breaker	Circuit Breaker + Terminal Cover	Circuit Breaker + Terminal Cover + Rotary Handle (Front Contact Type)	Circuit Breaker + Terminal Cover + Rotary Handle (Extension Type)
Appearance				
Protection Degree	IP20	IP40	IP40	IP40/IP54

※ 1) When applying IP54, please contact us separately.

Technical Data (HGM/HGE)

Installation

Insulation Distance (Safety Clearance)

For safety, insulation distance must be secured at installation. In case of installing a circuit breaker, safety clearances must be secured between breakers or between the circuit breaker and panel, bus bar and other adjacent devices. When the circuit breaker interrupts a short circuit, high temperature ionized gas is generated and the gas is discharged through the discharge outlet from the circuit breaker. As this gas can cause short-circuit accidents and grounding accidents, sufficient insulation distance is required between the circuit breaker and the panel.

※ In case insulation barrier is not installed between the circuit breaker terminals, secondary short-circuit accident may occur so it must be used.
The insulation barrier must be installed towards the direction of the circuit breaker's line indication part.

Separation distance in case the circuit breaker is installed side by side

※ In case of using the minimum separation distance (A1 = 0), terminal cover and phase to phase barrier must be assembled between the product. And pay attention to the tolerances of the enclosure dimensions.

Up/down/left/right distance in case of metallic panel

Front/back distance in case of metallic panel

Distance with circuit breaker in case the live part is exposed

※ If the distance between the live parts is less than 60 mm, the exposed part must be insulated.

HGM/HGE Type's Minimum Insulation Distance

Installation Angle

It can be installed vertically or horizontally without changing any characteristics of the HGM/HGE Type of circuit breakers and as for the detailed installation direction, please refer to the figure below.

Direction of Power Supply

HGM/HGE Type

When wiring the terminal between breakers, the LINE, LOAD mark in front of the product's cover must be checked.

Technical Data (HGP)

Environmental Operating Conditions

Temperature Derating

The overcurrent characteristic of MCCB has been set to the ambient temperature of 40°C. If the ambient temperature is less or more than 40°C, the overcurrent characteristics may differ.

If the Ambient Temperature is less than 40 °C

In order to ensure that the circuit breaker’s overcurrent meet the derating curve at the given ambient temperature, the real current (Ir) has to be adjusted. The temperature correction ratio or each MCCB is shown in the circuit breaker’s characteristics curve.

If the Ambient Temperature is more than 40 °C

As the internal temperature of MCCB is a sum of increased temperature due to current flow and the ambient temperature, if the ambient temperature exceeds 40 °C, thermal damage of internal insulation material of MCCB may occur causing the circuit breaker to trip at an early stage. When applying ambient temperature higher than 40 °C, the rated current must be adjusted as shown in the following rated current derating table.

In (Rated Current) :
Circuit breaker’s rating at ambient temperature of 40 °C
Ir (Real Current) :
Circuit breaker’s rating at the given temperature
 $I_r = \text{Correction Ratio (\%)} \times I_n$

Technical Data (HGP)

Environmental Operating Conditions

Altitude Derating

The characteristics of the circuit breaker is not affected at an altitude of less than 2,000 m Characteristics of insulation and air cooling of the circuit breaker are reduced at an altitude of more than 2,000 m and the rated current and rated voltage must be adjusted as shown in the table below. However, there is no change in the characteristics of breaking capacity.

Circuit breaker	Altitude	2,000 m	3,000 m	4,000 m	5,000 m
HGP Type MCCB HGP160D HGP250 ~ 800	Withstand Voltage (V)	3,000	2,500	2,100	1,800
	Insulation Voltage (V) U_i	1,000	850	750	650
	Maximum Operational Voltage (V) U_e	690	590	520	460
	Average Through-Current (A), at 40 °C $I_n \times$	1	0.96	0.93	0.9

Vibrations

The excessive vibration may cause problems such as decrease of breaking capacity, lower dynamic strength, reduction of electric current conductivity or compromising safety of operating characteristics. Therefore, proper consideration is required with regards to these environmental stresses when it comes to designating the circuit breakers. These stresses are generated by the vibration during transportation, magnetic impact during opening and closing operation and influence of adjacent devices. Our circuit breaker has been verified in accordance with the standards with regards to vibration resistance.

Vibration Test

Vibration test is verified with the standard requested by the shipping certification institute in compliance with IEC 60068-2-6. Out of the vibration test items, resonance test and vibration endurance test were verified based on the following standard.

Vibration Endurance Test

A sinusoidal wave with frequency of 30 Hz is applied for 90 minutes to check for abnormalities.

- 30 Hz : 0.7 g Acceleration

Resonance Test

It confirms whether vibration is generated in the characteristics part of MCCB by slowly changing the frequency in the frequency sector of the following sinusoidal wave.

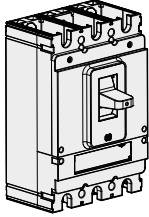

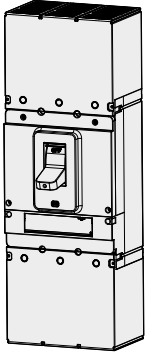

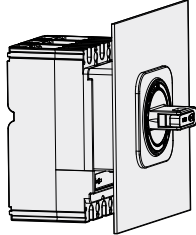

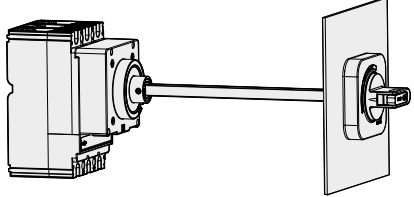

- 5 ~ 13.2 Hz : 1 mm Displacement
- 13.2 ~ 100 Hz : 0.7 g Acceleration

Seismic Performance and Shock Tolerance Table

Item	Seismic
Test Condition Mounting Posture Direction of Vibration, Shock	<ul style="list-style-type: none"> • Vertical mounting • Up-down, left-right, front-back
Test Result Status of MCCB Judgment Condition	<ul style="list-style-type: none"> • Non-conduction (ON or OFF status) • Status where rated current has been conducted on until the temperature of MCCB becomes constant and continuous <ul style="list-style-type: none"> • If it is ON, it should not turn OFF • If it is OFF, it should not turn ON • No abnormal status such as damage, deformation or loosened screw part • The characteristics of switch and trip after the test must be normal

Degree of Protection

The MCCB's IP rating is defined based on IEC 60529. The IP rating also depends on product conditions.

Condition	Circuit Breaker	Circuit Breaker + Terminal Cover	Circuit Breaker + Terminal Cover + Rotary Handle (Front Contact Type)	Circuit Breaker + Terminal Cover + Rotary Handle (Extension Type)
Appearance				
Protection Degree	IP20	IP40	IP40	IP40/IP54

※ 1) When applying IP54, please contact us separately.

Installation

Insulation Distance (Safety Clearance)

For safety, insulation distance must be secured at installation. In case of installing a circuit breaker, safety clearances must be secured between breakers or between the circuit breaker and panel, bus bar and other adjacent devices. When the circuit breaker interrupts a short circuit, high temperature ionized gas is generated and the gas is discharged through the discharge outlet from the circuit breaker. As this gas can cause short-circuit accidents and grounding accidents, sufficient insulation distance is required between the circuit breaker and the panel.

※ In case insulation barrier is not installed between the circuit breaker terminals, secondary short-circuit accident may occur so it must be used. The insulation barrier must be installed towards the both directions of the circuit breaker's line / load indication part.

Separation distance in case the circuit breaker is installed side by side

Up/down/left/right distance in case of metallic panel

Front/back distance in case of metallic panel

Distance with circuit breaker in case the live part is exposed

※ In case of using the minimum separation distance (A1 = 0), terminal cover and phase to phase barrier must be assembled between the product. And pay attention to the tolerances of the enclosure dimensions.

※ If the distance between the live parts is less than 60 mm, the exposed part must be insulated.

Technical Data (HGP)

Installation

Installation Angle

The HGP Type of circuit breakers can be installed vertically or horizontally without changing any characteristics and as for the detailed installation direction, please refer to the figure below.

Direction of Power Supply

As for the HGP Type circuit breaker, the breaking power of circuit breaker does not drop even if power is supplied to the load side. So, power can be supplied to any direction regardless of the line side/load side for use. With regards to the use in reverse connection, HGP got DEKRA Certificate under IEC 60947-2.

Technical Data (HGP)

MCCB Assembly and Terminal Mounting Specification

HGP Type

HGP Type circuit breaker can be mounted directly on the panel by using a screw. In case there is a bus bar or terminal at the back of the panel, insulation distance requires your attention. The wire and bus bar have to be wired according to the terminal part's specification for power supply of circuit breaker and fastened according to the specified tightening torque.

No	Type	Panel Mounting		Connection Terminal

Handling and Maintenance Inspection

Storage and Transportation

Storage Precaution

- | Ambient Temperature | - 20 ~ + 60 °C
- | Altitude | Below 1,000 m above sea level
- | Relative Humidity | Within 45 % ~ 85 %

The surrounding environment may affect the insulation function and Endurance of the molded case and earth leakage circuit breakers so the environment condition for usage must accurately be checked before application.

- Do not store in places with corrosive gas
Do not leave it around gas containing sulfurous gas or sulfur or ammonia gas and others.

- Do not store in places with high humidity for a long period of time

- Do not leave under direct sunlight for a long period of time.

- Avoid places with a lot of dust
Do not store in exposed places and use cover or packing material to prevent dust from piling up on the circuit breaker.

- Avoid storage in high or low temperature
Storage temperature must be maintained between - 20 °C ~ + 60 °C.
(Exceptionally, the HGM/HGP-MCCB in the original packing can be stored up to - 40 °C.)

Transportation Precautions

▲ Caution

- Do not apply impact during transportation. Dropping or applying strong impact may cause defect.
- Do not handle while holding the circuit breaker's accessory or the external plug-in wire of the accessory. It may cause injury in the handler or a malfunction of the circuit breaker.

- Hold the main unit of the circuit breaker during transportation
Do not handle while holding the external guide line of the accessory or the terminal bar.

- Pay attention when handling metal accessories
Sharp planes or edges in the metal accessory may cause injury.

- Do not apply impact during transportation
Dropping or applying strong impact may cause defect.

- Pay attention to the packaging of the circuit breaker before transportation
Inappropriate packaging may cause damage in the circuit breaker during transportation.

Installation

As for the detailed dimension of each part required for installation, refer to the external structure.

⚠ Caution

- Electrical works shall only be conducted by a person qualified for electrical works.
- For wiring works, the upper circuit breaker must be cut off (OFF) and execute the work after checking that it is not charged.
- In case of disconnecting cable or terminal bar, tighten the terminal screw firmly at the standard tightening torque.
In case the terminal screw is tightened loosely, it may cause damage and fire due to overheating.
- Strictly insulate up to the circuit breaker's portion with terminal barrier, insulating tube, insulating tape and others between bare conductors with regards to the front connection of the circuit breaker.
In case it is not insulated, it may cause short circuit.

- Secure sufficient arc space (Insulation distance) so that the arc gas discharge outlet is not blocked.
In case this discharge outlet is blocked, the current may not be blocked.
- Do not install the circuit breaker in abnormal environment such as high temperature, high humidity, dust, corrosive gas, vibration, impact and others. It may cause fire or abnormal trip.
- Install so that foreign substances (Metal powder, concrete powder etc.), rainwater and others do not enter the circuit breaker.
Such foreign substances in the circuit breaker may cause fire or malfunction.
- In case of 4 pole circuit breaker, the neutral wire of 3 phase 4 wire must be connected to the N phase (Right end part of the circuit breaker).
- When mounting the product, the live part (LINE) signal must be connected to the live part and the load part (LOAD) signal must be connected to the load part. Wrong connection may cause damage in product and electric shock.
- In case the insulation barrier is not mounted between the circuit breaker terminals, it may cause secondary short-circuit accidents so it must be used.

Handling and Maintenance Inspection

Installation

Installation Precautions

- Install the circuit breaker in a place that satisfies the following environment conditions

Installing the circuit breaker in places and environment other than the following may cause malfunction of circuit breaker, fire and others.

- Ambient temperature should be within -5 °C to +50 °C degrees. (The default MCCB based on 40 °C ambient temperature. 50 °C products have a separate code and temperature correction table. If the ambient temperature is - 40 °C to - 5 °C, the HGM/HGP MCCB can be used under limited conditions.)
- Relative humidity to be within 45 ~ 85 %
- Excessive vibration or impact to be avoided
- True height to be below 2,000 m
- To be used in an environment without excessive water vapor, oil vapor, smoke, dust, alkaline, corrosive material and others
- To avoid direct sunlight

- Arc gas exhaust hole must not be blocked
It may drop the breaking capacity.

- Attention to be paid to dust, metal fragments and others
After installation, protection cover and covers to be covered during work

- The insulation plate attached to the bottom of the circuit breaker must not be separated
It may destroy insulation and drop the insulation performance.

Connection Precautions

- When fastening the terminal screw, it should be fastened according to the specified torque
Incomplete fastening of terminal screw may cause overheating so each terminal screw must be fastened completely according to the specified torque. In addition, excessive fastening torque may cause damage in the terminal screw and the circuit breaker case.

- Use of lubricant at the terminal screw part is prohibited
Lubricant reduces the friction of the screw, causing the screw to loosen, ultimately leading to an increase in temperature.

- Exposed conductor must be insulated
Insulating tube or insulating tape must be used for complete insulation between the bare conductors of the MCCB.
In case the terminals are not insulated, it may cause secondary short-circuit during short-circuit accidents.

- Stud must not be deformed
Excessive force must not be applied to the stud at the conductor connecting part of the rear connection type.
In addition, stud must not be deformed during wiring.

- In case of 4 pole circuit breaker, the neutral wire of 3 phase 4 wire must be connected to the N phase.
It may not function in overcurrent which may cause fire.

- The conductor must be fixed firmly on a flat state.
As for the connecting conductor, electromagnetic force between conductors is generated by extremely big fault current so it must be fixed firmly.

Connection Precautions

The following table is the impact electromagnetic force generated by fault current.

Impact Electromagnetic Force per 1 m Conductor

Regulated Short-Circuit Current kA (Power Factor)	Electromagnetic Force (In Case of 3 Phase Short Circuit) N (kgf)	
	10 cm Conductor Interval	20 cm Conductor Interval
10 (0.4)	490 (50)	245 (25)
18 (0.3)	1,863 (190)	932 (95)
25 (0.2)	4,412 (450)	2,206 (225)
35 (0.23)	8,630 (880)	4,315 (440)
42 (0.2)	12,455 (1,270)	6,277 (635)
50 (0.2)	17,652 (1,800)	8,826 (900)
65 (0.2)	29,910 (3,050)	14,955 (1,525)
85 (0.2)	51,190 (5,220)	25,595 (2,510)
100 (0.2)	70,804 (7,220)	35,402 (3,610)
125 (0.2)	110,815 (11,300)	55,408 (5,650)

- **Contact surface must be clean**

Dust and others must be removed from the contact surface to prevent increase in connection resistance at the contact surface.

- **Conductor must be connected so that it has direct contact with the contact surface**

Do not use bolt or nut between the contact surfaces of the conductor.
If there is no direct contact between conductors, it may cause increase in temperature and fire.

- **Do not overlap the conductors**

When numerous conductors are connected to the terminal bar, do not overlap and assemble.
Assemble at both ends of the terminal bar.

Maintenance Inspection

Initial Inspection

- Residues of steel plate, grinded materials of the wire, other conductor's foreign substances and others must not be left around the terminal of the circuit breaker
- There must be no crack and damage in the cover and base
- The fastening status of the terminal fastening part must be checked
- Check must be made if the rated voltage and breaking capacity of the circuit breaker are correct
- When the insulation resistance is measured using a 500 V insulation-resistance tester, it must be above 5 MΩ

Withstand Voltage

Main Circuit		Auxiliary Circuit or Control Circuit ¹⁾	
Rated Insulation Voltage	Test Voltage (Effective Value of Interchange)	Rated Insulation Voltage of Operational Circuit	Test Voltage (Effective Value of Interchange)
$U_i \leq 300$ V	2,000 V for 1 min	$U_{is} \leq 60$ V	1,000 V for 1 min
$300 < U_i \leq 600$ V	2,500 V for 1 min	60 V < $U_{is} \leq 600$ V	$2 \cdot U_{is}$ 1,000 V (최소 1,500 V) for 1 min

※ Based on the above mentioned table, do not conduct withstand voltage test above it.

1) Between terminal and grounding

Handling and Maintenance Inspection

Installation

Regular Inspection

Inspection shall be conducted once in 1 month before/after the commencement of the equipment operation in order to maintain the performance of the circuit breaker and to prevent unexpected accidents. After that, regular inspection is required depending on the environment.

Standard of Inspection Period

Extent	Environment	Standard of Inspection Period
Standard Usage State	Clean and dry state of air	Less than 10 years after installation - Once in 2 ~ 3 years
		More than 10 years after installation - Once a year
		More than 15 years after installation - Once in 6 months
	Place without corrosive gas even though there is dust inside	Less than 10 years after installation - Once a year
		More than 10 years after installation - Once in 6 months
		More than 15 years after installation - Once a month
Bad Environment	Place containing sulfurous acid, hydrogen sulfide, salinity, vapor and others	Less than 5 years after installation - Once in 6 months
		More than 5 years after installation - Once a year
	Places with specially more corrosive gas	Once a month

Regular Inspection Item

Inspection Item	Procedure	Countermeasure
Tightening of Terminal Screw	<ul style="list-style-type: none"> Inspect tightening of terminal screw, conductor connecting screw 	<ul style="list-style-type: none"> Tighten according to the specified torque Ensure that it is not tightened excessively
Dust and Foreign Substance	<ul style="list-style-type: none"> Check for foreign substance such as dust on the circuit breaker's surface, especially the top of the live part. There must be no dust or foreign substance to secure insulation distance 	<ul style="list-style-type: none"> Remove dust, foreign substance and others using cloth with clean surface types (Do not use thinner or detergent)
Damage in Mold Case	<ul style="list-style-type: none"> Check for damage or crack on the circuit breaker's cover and base 	<ul style="list-style-type: none"> Replace circuit breaker
Arc Exhaust Hole	<ul style="list-style-type: none"> Check for pollution in the arc exhaust hole 	<ul style="list-style-type: none"> If there are burns or excessive pollution due to melted metal particles and others, replace the circuit breaker
Switch Operation	<ul style="list-style-type: none"> If the circuit breaker was maintained at closed state at normal times, operate the switch multiple times. Friction caused by hardened grease and others will be reduced and the contact resistance can be stabilized Press the trip button to trip the circuit breaker multiple times 	<ul style="list-style-type: none"> If there is a problem in the switch operation of the circuit breaker, replace or contact the nearest store If the specified limit value of the switch operation has exceeded, replace
	<ul style="list-style-type: none"> If internal options were installed in mccb, the options should be checked when mccb is in switch operation 	<ul style="list-style-type: none"> If there is a internal option problem in the swtich operation, replace
Discoloration of Terminal Part	<ul style="list-style-type: none"> Check for severe discoloration in the terminal part or conductor part If there is severe discoloration in the copper conductor or silver coated part, check the insulation performance caused by thermal damage 	<ul style="list-style-type: none"> Slight discoloration in the silver coated part is not a problem. If there is a problem in insulation due to thermal damage, replace the circuit breaker
Insulation Resistance	<ul style="list-style-type: none"> Separate all conductors connected to the circuit breaker and measure the insulation resistance between the poles, terminals and groundings 	<ul style="list-style-type: none"> If the insulation resistance is not more than 5 MΩ, replace

Inspection and Processing after Blocking Fault Current

In case the circuit breaker has blocked the fault current, determine whether it can be re-used or whether it has to be replaced with a new product depending on the size of the fault current.

- In case the arc exhaust hole is not polluted or there are no other abnormalities, it can be reused.
- In case there is pollution such as dark burns around the arc exhaust hole and in case the insulation resistance is above 5 MΩ, there is no dielectric breakdown when the specified withstand voltage is applied and in case there is no excessive temperature increase in the terminal part, it can be reused.
- If there are burns at the handle part, severe pollution around the arc exhaust hole, melted metal particles and others, replace the circuit breaker immediately.

Countermeasures with Regards to Abnormal Phenomenon

In case there is abnormal phenomenon during the use of circuit breakers, take appropriate action according to the following table.

Type of Abnormality	Phenomenon	Assumed Cause	Action to be Taken
Abnormal Heating	Heating at terminal part	• Loose terminal screw, conductor connecting screw	Re-tighten according to the specified torque
		• Increased resistance of contact	Replace circuit breaker
	Damage in insulation material at terminal part	• Loose terminal screw, conductor connecting screw • Defect in contact between circuit breaker's terminal and terminal bar or cable lugs due to loose screw tightening and interference caused by foreign substance	Replace circuit breaker
Defect in Current Flow	Abnormal heating in the circuit breaker's external case	• Increased resistance of contact	Replace circuit breaker
		• Loosening at the internal connection part	
		• Increased current density due to disconnection	
Does Not Function	Abnormal voltage at load side	• Big consumption at contact	Replace circuit breaker
		• Foreign substance between contacts	
		• Fusing at conductive part (Excessive opening/closing and corrosion due to corrosive gas)	
Does Not Function	ON does not function	• No reset in trip state	ON after reset
		• Damage in trip mechanism due to excessive opening/closing	Replace circuit breaker
		• Demagnetized state of under-voltage trip device	Apply specified voltage
	OFF does not function	• Fusing at contact	Replace circuit breaker
		• Demagnetized state of under-voltage trip device	Apply specified voltage
	RESET does not function	• Bimetal has not been cooled sufficiently	Reset after sufficient cooling
		• Corrosion or deformation of bimetal	Replace circuit breaker
• Abnormality in mechanism			
• Can't be used due to excessive opening/closing			
Frequent Breaking	Trip under rated current	• Damage in mechanism due to excessive breaking current	Lower the ambient temperature using wind and others
		• High ambient temperature (Above 40 °C)	
		• Abnormal heating due to loosening of screw at terminal part	
	Trip in running current	• Internal heating at the circuit breaker	Re-tighten according to the specified torque
		• In case the cross sectional area of connecting conductor is smaller than the regulation	Replace circuit breaker
		• Trip in running inrush current	Change the connecting conductor or change the circuit breaker's rated current
		• Trip during switching at Y-Δ operation	Change the instantaneous trip current setting or replace with circuit breaker with bigger rated current
Overcurrent does Not Function	Does not function above specified operational current	• Trip during switching in reversible operation	Replace with circuit breaker with bigger rated current
		• Trip in big running current	
		• Trip in long running current	
Abnormality in Accessory	Abnormal operation of shunt trip device (SHT)	• Short circuit between motor layer	Repair or replace motor
		• Wrong connection of SHT/UVT's operational circuit	Inspect wiring
		• When current limiting breaking of upper fuse or cooperation with upper circuit breaker is low	Review cooperation again
	Abnormal operation of under-voltage trip device (UVT)	• When the ambient temperature is significantly low	Check the compensating current
		• Inappropriate rated current	Check the rated current
		• Abnormal voltage of operational circuit	Check the rated voltage
Abnormal operation of auxiliary switch (AUX) and alarm switch (ALT)	Abnormal operation of auxiliary switch (AUX) and alarm switch (ALT)	• Does not function due to voltage drop in operational circuit	Maintain the rated voltage
		• Coil damage due to difference in the coil's rated voltage, non-operation of damage prevention switch and others	Replace accessory
	Abnormal operation of auxiliary switch (AUX) and alarm switch (ALT)	• Defect in mechanism	Replace accessory
Abnormal operation of auxiliary switch (AUX) and alarm switch (ALT)	Abnormal operation of auxiliary switch (AUX) and alarm switch (ALT)	• Difference in voltage used	Check the rated voltage
		• Damage in UVT controller	Replace and check disconnection
		• Contact damage due to excessive micro switch rating	Replace and check the micro switch load
Abnormal operation of auxiliary switch (AUX) and alarm switch (ALT)	Abnormal operation of auxiliary switch (AUX) and alarm switch (ALT)	• Defect in mechanism	Replace and repair accessory
